

You are going to notice a few changes around here...

We've been working hard to **keep you safe**

Patient screenings, face masks, increased PPE, frequent disinfecting, social distancing: we've been following ADA & CDC **recommendations** with fidelity.

We've made a lot of positive changes to our safety protocols, but perhaps the most important improvement we've made is how we handle **aerosols** during your procedures.

As you know, COVID-19 and other viral agents can be transmitted through microscopic air-borne particles called aerosols.

Our clinic is now **equipped** to reduce aerosols using medical grade HEPA 13 Air Purifiers in every treatment room.

In addition, we have also implemented a **technology** of localized high-volume suction inside your mouth that continuously removes 90% of aerosols at the source.

Our top priority is always your health, **safety** and well-being. The choices we make to keep you safe are research-based and with your best interests at heart.
